

Cluoker

English Rules v1.0

Game Overview

Cluoker is a deduction game combining logical elimination and risk management. Players must accurately pinpoint their hidden "Answer Card" by playing "Clues" without seeing their own card. All you need is a standard deck of playing cards.

Setup

1. **Answer Card:** Deal 1 card to each player. **Note:** You CANNOT look at your own Answer Card! Show the face of the card to all other players. Once everyone has seen it, **place it face-down on the table in front of you**. If other players need to re-verify during the game, they may flip it over to check, but you must continue to look away.
2. **Hand:** Deal 3 cards to each player. Keep these hidden from other players.
3. **Deck:** Place the remaining cards face-down in the center of the table as the draw pile.

Gameplay

Choose a starting player. Play proceeds clockwise. On your turn, complete the following steps:

1. **Play a Clue:** Choose 1 card from your hand and play it face-up on the table in front of you.
2. **Ask for Verification:** Ask the other players, "*Is this a clue?*" The other players must collectively and honestly answer "**Yes**" or "**No**" based on the **Clue Criteria**.
3. **Mark the Status:** To help you remember, organize your played cards based on the answers received. Two recommended methods are:
 - **Orientation:** Place "Yes" cards vertically and "No" cards horizontally (or vice versa).
 - **Separation:** Place "Yes" cards on the left side and "No" cards on the right side (or vice versa).
4. **Draw:** Draw 1 card from the deck to maintain a 3-card hand.
5. **End Turn:** Play passes to the next player.

The Clue Criteria (The ± 1 Rule)

A card you play is considered a "Clue" (and receives a "Yes") if it meets **ANY** of the following conditions:

- **Same Suit:** The played card matches the suit of your Answer Card.
- **Adjacent or Exact Value:** The played card's value is exactly ± 1 or equal to your Answer Card. (Values: A=1, J=11, Q=12, K=13).
- **Wrap-around:** The values wrap around, meaning Ace (A) and King (K) are considered adjacent.

Example:

If your Answer Card is the **5 of Hearts**.

If you play ANY Heart, or ANY 4, 5, or 6 (regardless of suit), the answer is "Yes". For any other card, the answer is "No".

Winning & Guessing

- **Making a Guess:** On your turn, instead of playing a clue card, you may declare that you are guessing your Answer Card.
- **One Shot:** Each player has only **ONE** chance to guess per game.
- **Wrong Guess:** You are immediately eliminated from the game.
- **Correct Guess:** You successfully crack the code! The first player to guess correctly wins the game. If multiple players guess correctly in the same round, they share the victory (it's a draw).
